

## Cloud Computing

### How Can You Use This New Technology To Grow Your Business?

Cloud computing is simply a technology used to access services over the Internet, which is referred to as 'the cloud'. Cloud computing is used to perform the functions that are traditionally done with hardware and software installed on individual computers and servers.

NetTek's **Desktops2Go™ (D2G)** is a state-of-the-art, fully hosted, server and desktop solution that allows you to focus on your business – not technology. With **D2G**, NetTek provides everything needed: hardware, software, connectivity, maintenance, and data protection for a single monthly payment.

### What Are The Benefits Of Cloud Computing?

#### Lower Cost

Using virtualization technology and NetTek's Data Center you can reduce overall IT costs.

#### Increased Mobility

With a web-based interface, you can access your data from anywhere at any time from your office or any remote location.

#### Improved Disaster Recovery

NetTek's Data Center is complete with redundant Internet, cooling, power, servers, and local/remote off-site data backup.

#### Off-site Backup

Reliable off-site backup of all business data is executed daily protecting from valuable information loss. Restoration of files is simple providing clients peace of mind.

#### Improved Manageability

NetTek manages your company IT to improve your ability to serve your customers. This allows you to focus on managing your business.

Call us today and see how this new technology – **Desktops2Go™** – can empower your business and take it to a whole new level.
